My first dashboard, and it told me a story about who leaves and why. 📊

I built an HR Analytics Dashboard in Tableau to explore employee attrition across 1,470 employees. 237 of them left, a 16.12% attrition rate.

🔍 What the data showed:
• Employees aged 25-34 account for 112 of the 237 exits (about 47% of all exits), the largest share
• R&D (56%) and Sales (39%) account for most exits
• Men account for 150 exits and women for 87
• Life Sciences and Medical education backgrounds account for about 64% of exits
• Sales Executives had the most employees rating job satisfaction 4 (112 of 326, about 34%)

What I practiced: KPI design, interactive filters, data visualization, and turning numbers into a story.
